

100 million years ago:

Both sea turtles and dinosaurs share Planet Earth.

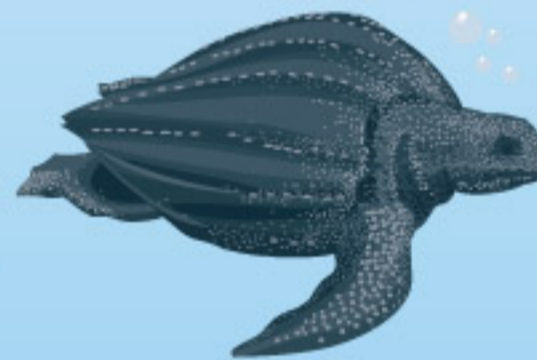

60 million years ago:

Dinosaurs become extinct, while sea turtles persevere.

100,000 years ago:

Humans inhabit the Earth, co-existing with sea turtles.

During the 21st century:

Due to unsustainable activities carried out by humans, the populations of the 6 species of sea turtles of the Americas are in danger of extinction.

**We need your help,
the future is up to YOU!**

Inter-American Convention for the Protection
and Conservation of Sea Turtles
